

The Puget Sound Chemist

Vol. V, No. 1

Bagley Hall, University of Washington, Seattle

January, 1943

Published by the Puget Sound Section of the American Chemical Society

FEBRUARY MEETING

On Tuesday, February 2, we are fortunate in having the Walker Ames professor of botany at the University of Washington, Dr. William Crocker, address the Section. Dr. Crocker is managing director of the Boyce Thompson Institute for Plant Research, Yonkers, New York, and is visiting professor throughout the winter quarter.

Dr. Crocker's subject will be "The Effect of Chemicals on the Development and Movement of Plants." He will show slides and time lapse motion pictures of the development and movement of plants. Hence this is a meeting that is graphic enough to interest the lay chemist, botanist or plant physiologist, yet it is basic enough to appeal to chemists, botanists and chemical engineers.

The meeting will be in Room 131 Bagley Hall, University of Washington, at 8 p.m., Feb. 2. It is open to the public, so bring your friends and pass this notice on.

D I N N E R

A dinner honoring Dr. Crocker will be at the University Commons at 6:30 that evening. Since, unfortunately, few members outside Seattle can attend, most reservations can be made by telephone - M E 0630, Local 439. Please send in reservations by Monday noon. The cost will be 85¢ per plate.

I cannot attend at that hour ☐

I favor the plan of having a group
dinner after such a meeting ☐
