OCTOBER MEETING

The first meeting of the 1943-44 season will be a noon gathering held jointly with the Seattle Chamber of Commerce. Dr. Paul Kolachov will speak at the Community Council Luncheon on Friday, October 15. Dr. Kolachov is Technical Counselor for Joseph E. Seagram and Sons, Inc. He will speak on "Industrial Possibilities of New Crops". He has lectured before many sections of the Society on this general topic. This is an excellent opportunity to hear an authority in this important field and we welcome the opportunity to meet jointly with the Chamber members.

Luncheon is served promptly at twelve and Dr. Kolachov will speak from 12:30 to 1:00. It is not necessary to make a reservation. After the meeting, Dr. Kolachov would like to meet members of the section, and informal discussion or questions can be continued.

P R O G R A M

The number of speakers who can come from afar is naturally limited. There are definite plans for at least one other to appear in the spring. This situation could be regretted. On the other hand, we may have been leaning too heavily on the touring speakers and we could consider the present situation as an opportunity to trot out or unearth, if possible, our local talent. There are in your midst chemists who have things to tell us of great interest, if they are not shrouded in military or competitive secrecy. Suggestions for future speakers will be greatly welcomed.

* * * * *

We have been asked to give publicity to the following self-explanatory statement:

PATENTS CONTROLLED BY THE ALIEN PROPERTY CUSTODIAN AVAILABLE FOR LICENSING

The Alien Property Custodian of the United States Government has vested approximately 45,000 United States patents and patent applications which were formerly enemy-owned or enemy-controlled, and is now licensing these patents and applications on a non-exclusive basis for use during the war and post-war periods. A \$15 fee is charged for each patent licensed.

There are patents in practically every field of the mechanical, electrical and chemical arts, and manufacturers searching for new products to manufacture should examine these patents and applications.

If interested, write to the Alien Property Custodian, Division of Patent Administration, Field Bldg., Chicago, 3, Illinois, and request a copy of their leaflet entitled, "Index of Patents Vested in the Alien Property Custodian", and a copy of their instruction sheet giving necessary information on how to proceed.

The Office of Alien Property Custodian urges you to make use of these valuable inventions.
